

Hydroplanter

Besgrow Hydroplanters are specifically designed wafers of compressed New Zealand Sphagnum moss used for the economical planting of seedlings. A convenient product, Hydroplanters increase efficiency of the planting process and promote fast, healthy growth.

SMALL THING – BIG RESULTS

Hydroplanters have been designed to save you time and money by reducing production labour. Hydroplanters speed up the planting process, while ensuring that the same amount of moss is used in each cell. Commercial growers have praised them for their cost savings, convenience, ease of use and allowing for easy inspection of roots.

Hydroplanters are used in pairs to hold a seedling while being planted into a seed tray. When water is applied the moss expands immediately within the cell, supporting the seedling and hydrating the roots.

DESIGNED FOR SUPERIOR RESULTS

Produced from Spagmoss, Hydroplanters have the same beneficial attributes of New Zealand Sphagnum moss, with improved functionality. Due to the long lasting properties of Hydroplanters, they are able to be planted directly into Orchiata or wrapped in Spagmoss at the next stage of planting.

NATURALLY SUSTAINABLE & RENEWABLE

All of our Besgrow Sphagnum moss products, including Hydroplanters, are harvested from fully renewable resources, managed sustainability to ensure future supply and to care for our environment.

USAGE	CHARACTERISTICS	TECHNICAL				
<ol style="list-style-type: none"> Place seedling on top of Hydroplanter Place a second Hydroplanter on top of seedling Place Hydroplanters and seedling into cell tray Add water to hydrate Hydroplanters 	<ul style="list-style-type: none"> Maintains structure in the pot for many years NZ Sphagnum moss is naturally sterile Holds up to 20 times its weight in water Large range of shapes and sizes available Available in different grades and weights to suit your growing requirements 	Die No.	Dimension (mm)*	Qty/sheet	Qty/Ctn	Shape
